# EARTH MOVING EQUIPMENT

## TLB

A tractor-loader-backhoe, more commonly referred to as a TLB, is a multipurpose and versatile machine that is often used in the construction industry when **digging and moving rubble or sand is required**.

TLBs are extremely manoeuvrable and are used across a number of industries.

## Front-End-Loader

A front-end loader is a large engineering vehicle used to pick up and move materials. They can be used to move biomass materials into a dump truck. A front-end loader is also called a **scoop loader, skip loader or bucket loader**.

Front-end loaders are indispensable attachments for compact tractors. Loaders make light work of small farm and gardening tasks including **lifting and transporting material such as wood, rocks, soil and debris**.

## Grader

Commonly used in the **construction and maintenance of dirt and gravel roads for creating a flat surface where the asphalt will be placed**. For civil engineering projects, the purpose of the graders is to perform fine grading. The motor grader can also be found on major mining sites all over the world.

**Graders** are most commonly used in civil construction, roadworks and on mining sites for creating smooth and flat surfaces.

# EARTH MOVING EQUIPMENT

## Excavator

A tractor-loader-backhoe, more commonly referred to as a TLB, is a multipurpose and versatile machine that is often used in the construction industry when **digging and moving rubble or sand is required**.

TLBs are extremely manoeuvrable and are used across a number of industries.

## SMOOTH ROLLER

Smooth wheel rollers are ideal for **gravel, sand, ballast, and surface dressings**.

They are not effective in compacting embankments and softer turf, but they are the most effective in compacting silty or sandy soils with the fewest passes

## ROLLER RIDEON

Ride on rollers purpose is to uniformly compact the ground and leave a smooth, level or cambered surface. Different types of roller, vibratory rollers, dead weight rollers, wheeled or metal drummed rollers etc.

Dead weight rolling - this is the weight of the roller alone providing the compaction of the material.

## PADFOOT ROLLER

Pad foot, tamping foot or sheepsfoot rollers are typically used for **compacting clay and other fine-grained soils**.

The textured bumps on the roller assist with compacting silty clays, allowing the padfoot roller to move over the surface without lifting sticky mud or clay off on to the roller drum

## SEWER LINE CLEANING EQUIPMENT

### COMBINATION TRUCKS

#### VACUUM

Handle large scale liquid and sludge up in sewer and septic system maintenance

#### JETTING

Used for cleaning underground sewer pipeline using high pressure water sprayed through the nozzle

Combination Truck/Jetting/Vacuum

# SCREENING EQUIPMENT

## SCREENING MACHINES

---

**Screens** are used throughout the aggregate, mining and construction to classify and sort rock, stone, sand, construction rubble and other materials by size

# CONSTRUCTION VEHICLES

## Tipper Trucks

Dumpers and tipper trucks are the same variety of machine, with minor variations in their design. Essentially, both are used to move dirt around confined and narrow spaces. They are almost always needed when doing landscaping and site work as they help remove dirt to make space on the construction site

## WATER CART

While the road is unsealed water trucks are used to spray the road area, as it aids in the compaction of the soil.

Generally, a water cart is used with a grader and/or roller compactor so that your road surface gets a level smooth surface. Often construction sites are in remote areas and water is not on tap

## Various Vehicles

Most small to medium sized construction companies make use of bakkies to carry inventory and people to and from site. Whether it is a painting, plumbing or building maintenance company, they all will have one or more bakkie on their fleet to ensure that they get the job done

## Mobile Concrete Mixer

Dumpers and tipper trucks are the same variety of machine, with minor variations in their design. Essentially, both are used to move dirt around confined and narrow spaces. They are almost always needed when doing landscaping and site work as they help remove dirt to make space on the construction site

# EQUIPMENT

PIPELINE TESTER

WATER PUMP

STEP LADDERS

Walk- behind drum roller compactor

2000L Diesel BOUWSER

60KVA 3 Phase Diesel Generator

# EQUIPMENT

Trailer Mounted Concrete Pump

SCAFOLDING

FLOOR SANDING

SITE CONTAINER/OFFICE

JACK HAMMER

CONCRETE VIBRATOR
